General information

The motor range represents a new generation of water cooled motors developed in response to market demands for improved technical features. The range is available in IEC frame sizes 280 to 450. Water cooling is a very efficient method of transferring heat away from the motor, and water cooled motors provide high output power per unit of weight. Cooling efficiency is maintained throughout the speed range, which is especially important in constant torque applications. These advantages make the motors ideal for a range of uses, including marine applications, water and waste water pumping, printing machines, and wind turbine generators. The basic structure of the motors is optimized for variable speed use.

International motor efficiency standards

Since the validation of the standard IEC/EN 60034-30, a worldwide energy efficiency classification system exists for low voltage three-phase asynchronous motors. This system increases the level of harmonization in efficiency regulations around the world. International Electrotechnical Commission (IEC) standard IEC/EN 60034-30:2008 defines energy-efficiency (IE code) classes for single speed, three-phase, 50 and 60 Hz induction motors. The standard is part of an effort to unify motor testing procedures and efficiency and product labeling requirements to enable motor purchasers worldwide to easily recognize premium efficiency products. The efficiency levels defined in IEC/EN 60034-30 are based on test methods specified in IEC/EN 60034-2-1:2007.

To promote transparency in the market, IEC 60034-30 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used as the different methods can produce differing results.

All water cooled motors fulfill IE2 efficiency class. ABB determines efficiency values according to IEC/EN 60034-2-1 using the low uncertainty method i.e. indirect method, with additional load losses determined by measurement.

IEC/EN 60034-30:2008

IEC/EN 60034-30:2008 defines three International Efficiency (IE) classes for single speed, three-phase, cage induction motors.

- IE1 = Standard efficiency (EFF2 in the former European classification scheme)
- IE2 = High efficiency (EFF1 in the former European classification scheme and identical to EPAct in the USA for 60 Hz)
- IE3 = Premium efficiency (identical to "NEMA Premium" in the USA for 60 Hz)
- IE4 = Super premium, according to IEC/TS 60034-31

Efficiency levels defined in IEC/EN 60034-30 are based on test methods specified in IEC/EN 60034-2-1:2007.

Compared to the former European efficiency classes defined by the CEMEP agreement the scope has been expanded.

IEC/EN 60034-30 covers almost all motors (for example standard, hazardous area, marine, brake motors)

- Single speed, three-phase, 50 Hz and 60 Hz –2-, 4- or 6-pole
- Rated output from 0.75 to 375 kW
- Rated voltage UN up to 1000 V
- Duty type S1 (continuous duty) or S3 (intermittent periodic duty) with a rated cyclic duration factor of 80 % or higher
- Capable of operating direct online

The following motors are excluded from IEC 60034-30:

- Motors made solely for converter operation
- Motors completely integrated into a machine (for example, pump, fan or compressor) that cannot be tested separately from the machine

Minimum efficiency values defined in IEC 60034-30:2008 standard

(based on test methods specified in IEC 60034-2-1:2007)

Output kw	IE			IE2			IE3		
	Standard efficiency			High efficiency			Premium efficiency

Cooling designation

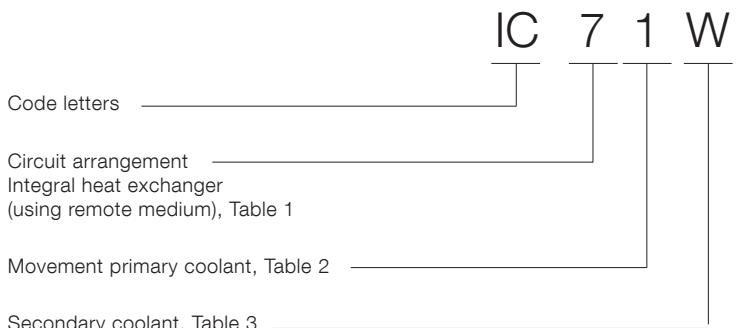

Table 1. Circuit arrangement

Characteristic numeral	Brief description	Definition
7 (see note 2)	Integral heat exchanger (using remote medium)	The primary coolant is circulated in a closed circuit and gives its heat via a heat exchanger, which is built into and forms an integral part of the machine, to the secondary coolant which is the remote medium.

Note 2. The nature of the heat exchanger is not specified (ribbed or plain tubes, etc.).

Table 2. Method of movement (Movement primary coolant)

Characteristic numeral	Brief description	Definition
1	Self-circulation	The coolant is moved dependent on the rotational speed of the main machine, either by action of the rotor alone or by means of a component designed for this purpose and mounted directly on the rotor of the main machine, or by a fan or pump unit mechanically driven by the rotor or the main machine.

Table 3. Coolant (Secondary coolant)

Characteristic letter	Coolant
W	Water

Optimized for variable speed applications

The basic structure of the M3LP water cooled motors is as standard optimized for variable speed applications. The basic selection rules below should be considered, please refer to product catalogue for Process performance motors for details.

Motor loadability with ACS 800 frequency converter

The curves in figure 1 are **guidelines** (not guaranteed values) for standard ACS 800 drives with DTC-control. These guidelines present the maximum continuous load torque of a motor as function of frequency (speed) to give the same temperature rise as with rated sinusoidal supply at nominal frequency and full rated load.

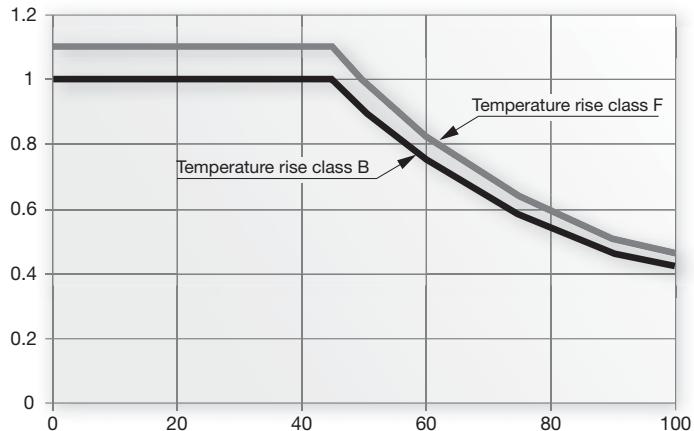

Figure 1. Motor loadability with ACS 800, field weakening point 50Hz.

Insulation protection

The increased voltage stresses of winding insulation in variable speed drive should be considered, therefore the precautions described in the table below must be taken to avoid risks of insulation damage.

Bearing currents

To avoid bearing currents all water cooled motors in variable speed drive must be equipped with insulated bearing at N-end.

Framesize	355	400, 450
$U_N \leq 500V$	Standard motor	Common mode filter
$U_N \leq 600V$	dU/dt filter (reactor) OR Reinforced insulation	dU/dt filter (reactor) and common mode filter OR Reinforced insulation and Common mode filter
$U_N \leq 690V$	Reinforced insulation	Reinforced insulation, dU/dt filer And dU/dt filter (reactor) and Common mode filter

Mechanical design

Stator

The frame material differs depending on the size of the motor. Frame sizes 280 and 315 are of casted aluminum with stainless steel water tubes inside the frame. These frames have also modular feet structure (steel).

Frame sizes 355 to 450 are provided with integrated feet, both the frame and feet made of steel. Bearing housing and terminal box are of cast iron. Motors can be supplied for foot mounting, flange mounting and combinations of these.

Degree of protection is IP 55 as standard, higher degree of protection, IP 56, is available as option.

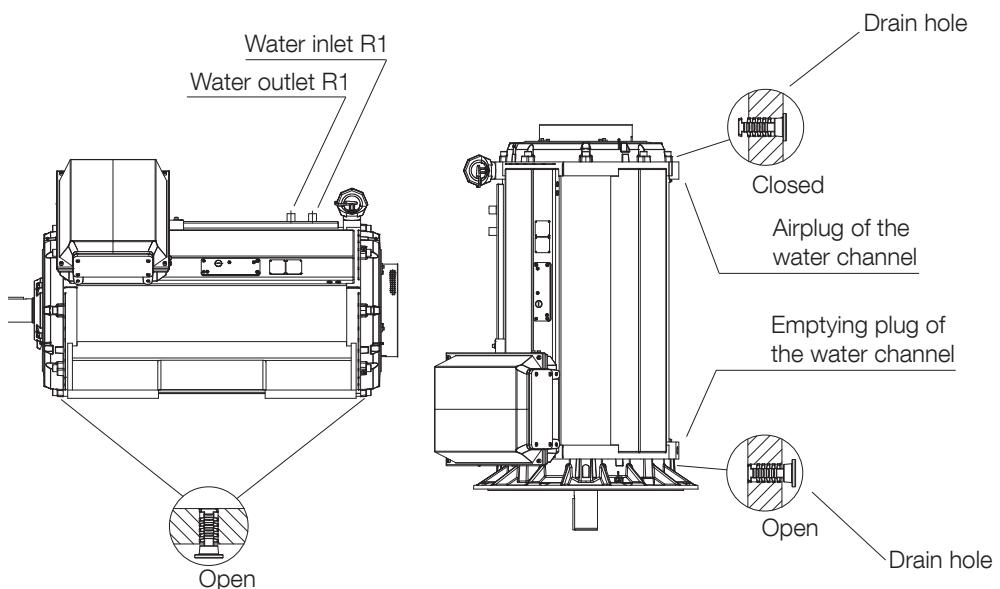

Motors from frame size 280 up to 315 ML are without bearing fan as standard, except motor types M3LP 315 ML 2-pole. Frame sizes 315KH and 355 are fitted with bearing fans at both non-drive and drive ends. Motors in frame sizes 400 and 450 are fitted with a bearing fan, which is mounted on the non-drive end.

Drain holes

Motors are supplied with drain holes and closable plugs as standard to avoid water from gathering in the windings.

Cooling channel

The motors in frame sizes 355 to 450 are equipped with emptying plug in the lowest position and air plug in the highest position at the channel. Due to the cooling channel construction no emptying or air plugs are needed for frame sizes 280-315.

Emptying plug and air plug for sizes 355 to 450.

Cooling water requirements

Requirements for cooling water in motor sizes 280–315

Water with a proportion of chloride up to 3000 mg/l can be used if the ingress of oxygen into cooling water is prevented and the cooling water temperature does not exceed 30 °C. The highest allowed pressure for cooling water is 5 bar.

Requirements for cooling water in motor sizes 355–450

Cooling water must be tap water quality. Sea water or water with a proportion of chloride above 120 mg/l should not be used. The highest allowed pressure for cooling water is 5 bar, with a recommended maximum input water temperature of 40 °C. Steel frame water-cooled construction is only to be used with a closed fresh water circulation. The cooling water circulates in ducts integrated in the machine frame. The material of the frame and ducts is carbon steel according to the standard EN 10025-S235JR. This material is prone to corrosion in saline and foul water. The corrosion products and fouling deposits might block the water flow in the ducts. This is why it is important to use pure water in the cooling system.

The minimum pressure and amount of cooling water for the basic construction of a water cooled motor is shown in the following table.

Standard values for the cooling water to be used in the cooling system:

- pH 6.5–9.5
- Alkalinity (CaCO₃) > 1 mmol/l
- Chloride (Cl) < 120 mg/l
- Conductivity < 1500 µS/cm

In most cases, normal tap water, i.e. water for domestic consumption, meets all these requirements.

The cooling water can also be inhibited with an agent protecting the cooling system against corrosion, fouling and, when necessary, against freezing. All materials in contact with the cooling water (pipes, heat exchanger, etc.) must be taken into account when selecting a suitable inhibitor.

The outlet water temperature rise is from 7–15 K.

Motor type M3LP	Number of inlets	Cooling water flow rate (l/min)	Water pressure min. (bar)	Water temperature rise (K)
280 SM_	1	20	2.0	7-12
315	1	30	2.0	7-12
355 ML_	1	30	2.0	10-15
355 LK_	1	35	2.0	10-15
400 L_	1	40	2.0	10-15
450 L_	1	50	2.0	10-15

Terminal box standard delivery

The terminal box in the frame sizes 280 to 355 is mounted on the top of the motor. The terminal boxes in the frame sizes 400 and 450 are mounted in the 45° angle on the motor, either on right or left hand side of the motor, to be defined when ordering.

Terminal box sizes 210, 370 & 750 can be turned 4x90° and terminal box size 1200 can be turned 2x180°. Degree of protection of standard terminal box is IP 55.

The terminal box is equipped with a steel flange for protection during transport. There are no cable glands or cable boxes as standard, but these are available as option. Please see variant code section table below for exact availability.

To ensure that suitable terminations for the motor can be supplied, please state the cable type, quantity and size when ordering. Non-standard terminal box designs - e.g. non-standard size or degree of protection - are available as options. The terminations are suitable for Cu- and Al-cables. The cables are connected to the terminals using cable lugs (not included with the motor).

Please see variant code pages for options.

Standard delivery 400/690 V

How to order?

- Check first that the terminal box can allow mounting of the cable and cores (refer to motor type and terminal box type cross reference page 18).
- If very large cables are used it might be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) depending on outer diameter of the cable(s).
- Select appropriate adapter and flange and gland(s) or cable sealing end unit.
- Note that turning the terminal box to a non-standard position might limit the use of some adapters.

Optional adapters

There is a broad selection of cable termination accessories available to allow termination of one or several cables. The most common ones are explained below, for other options please contact ABB.

Ordering example

Motor	500 kW, 4-pole, 400 V, 50 Hz, B3
Cables	2 pieces, outer diameter 72 mm, singel core cross section 200 mm ² clamping device needed, cable coming from below
Needed one terminal box for anticondensation heaters 240 V and another for PT100's in winding, one per phase 3-wire, material cast iron	
Motor	M3LP 355MLE 4 B3
Adapter	E-D, variant code 294
Cable sealing end unit	Variant code 278
Clamping	Variant code 231
Auxiliaries	Variant codes 380, 451, 502, 567, 568

Main terminal box and

maximum single core cross section

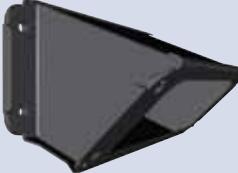

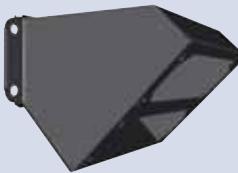

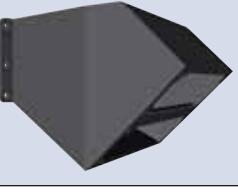

Only one size larger terminal box can be selected. Please check also the capacity of the cable entry, to make sure that the cables fit.

Standard terminal box	Size of opening	Max single cross section per phase mm ²	One size larger terminal box can be selected if larger single cross section is needed		
			Variant code 019 larger terminal box than standard	Size of opening with Variant code 019	Max single cross section per phase mm ²
210	C	2 x 240	370	D	2 x 300
370	D	2 x 300	750	E	4 x 500
750	E	4 x 500	1200	E	4 x 500
1200	E	4 x 500	NA	NA	NA

Optional adapters

To allow easy termination of cables entering the terminal box from above or below is it recommended to use an angle

adapter. These can also be used to allow mounting of several cable sealing end units or gland plates.

Adapter	Variant code	Opening towards terminal box	Flange or opening for cable sealing end unit	Material	Notes
	292	C	C	Steel	
	293	D	D	Steel	
	294	E	D	Steel	
	295	E	2 pcs D	Steel	
	296	E	3 pcs D	Steel	Only possible on terminal box 1200
	444	E	2 pcs E	Steel	Only possible on terminal box 1200

Flange, maximum size of glands and material

Flanges are delivered blind or can be drilled and tapped to accomodate glands to suit the cable diameter and amount of glands needed. Standard flange material is siluminum with terminal boxes up to size 370. From size 750 upwards flanges are painted mild steel. Stainless steel flanges are available as options.

For armoured and NPT cable glands please contact ABB.

Cable sealing end unit

As an alternative to flanges and cable glands, cable sealing end-units can be used. These allow more space for spreading the cores for easy terminating.

Cable sealing end units have rubber sealed entries for one or two main cables. In addition there are two M20 plugged holes for auxiliary cables.

M000437

Variant code	Opening towards terminal box	Cable outer diameter mm	Cable entry auxiliary cable	Accessories	Variant code 231; Standard cable gland with clamping device
277	C	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Optional	Optional
278	D	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Optional	Optional
279	D	1 or 2 pcs 60-80 mm *)	2 pcs M20 plugged holes	Optional	Optional

*) The cable seal inside the cable sealing end unit can be used so that it is suitable for cable diameters 40-52mm.

Auxiliary terminal box

It's possible to equip the motors from frame size 160 upwards with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. By using variant code 418 auxiliary terminal box in aluminum is provided. Cast iron auxiliary terminal box can be ordered with variant code 567. Both are equipped with M20 glands for entry of the connection cables.

Connection terminals are spring loaded type for quick and easy connection. These are suitable for up to 2,5mm² wires. Auxiliary terminal boxes are equipped with an earthing terminal. The first auxiliary terminal box is as standard located a RHS at D-end.

Bearings

The motors are normally fitted with single-row deep groove ball bearings as listed in the table below. SPM-nipples for bearing vibration monitoring are delivered as standard both at N- and D-end.

If the bearing at the D-end is replaced with a roller bearing (NU), higher radial forces can be handled. Roller bearings are suitable for belt drive applications.

Basic version with deep groove ball bearings

Motor size	Number of poles	Deep groove ball bearings	
		D-end	N-end
280	2-8	6316/C3	6316/C3
315	2	6316/C3	6316/C3
315	4-8	6319/C3	6316/C3
355	4-8	6322/C3	6316/C3
400	4-8	6324/C3	6319/C3
450	4-8	6326M/C3	6322/C3

When there are high axial forces e.g. in vertical position, angular contact ball bearings should be used, and direction of forces shall be informed. This option is available on request. When a motor with angular contact ball bearings is ordered, the method of mounting and direction and magnitude of the axial force must be specified. For special bearings, please see the variant codes.

Version with roller bearings, variant code 037

Motor size	Number of poles	Roller bearing variant code 037
		D-end
280	2	1)
280	4-8	NU316/C3
315	2	1)
315	4-8	NU319/C3
355	4-8	NU322/C3
400	4-8	NU324/C3
450	4-8	NU326/C3

¹⁾ On request

Axially-locked bearings

All motors are equipped as standard with an axially-locked bearing at the D-end.

Transport locking

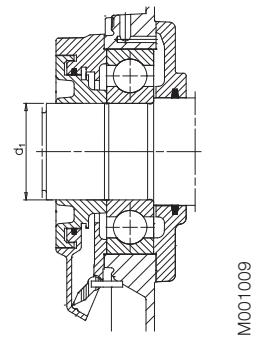

Motors that have roller bearings or angular contact ball bearing are fitted with a transport or angular contact ball bearings are lock before despatch to prevent damage to the bearings during transport. In case of transport locked bearing, motors are provided with a warning sign.

Locking may also be fitted in other cases where transport conditions are suspected of being potentially damaging.

Bearing seals

The size and type of seals are in accordance with the table below:

Motor size	Number of poles	Seals	
		D-end	N-end
280	2	Labyrinth seal	Enclosed
280	4-8	Axial seal VS80	Enclosed
315 ML, KH	2	Labyrinth seal	Labyrinth seal
315 M	4-8	Axial seal VS95	Enclosed
315 KH	4-8	Labyrinth seal	Labyrinth seal
355	4-8	Labyrinth seal	Labyrinth seal
400	4-8	Labyrinth seal	Labyrinth seal
450	4-8	Labyrinth seal	Labyrinth seal

Bearing life

The nominal life L10 of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90% of identical bearings in a large test series under certain specified conditions. 50% of the bearings achieve at least five times this figure.

The calculated bearing life L10 for power transmission by means of a coupling (horizontal machine) is $\geq 200,000$ hours. Corresponding life L10 for vertical machine in V1 position is $\geq 40,000$ hours. Other values on request.

Lubrication

On delivery, the motors are ready lubricated with high quality grease. The recommended grease used can be seen from ABB's Low Voltage Motors Manual delivered together with the motor or from the lubrication plate fastened to the motor frame. See example of lubrication plate on page 26.

All motors are equipped with relubrication nipples. The bearing system has been built so that a valve disc can be used to ease the lubrication. Motors are lubricated while running.

Lubrication intervals

ABB follows the L1-principle in defining lubrication interval. That means that 99% of the motors are sure to make the interval time. The lubrication intervals can also be calculated according to the L10-principle, which are normally doubled compared to L1-values. Values available from ABB at request.

Frame size	Amount of grease g	3600 r/min	3000 r/min	1800 r/min	1500 r/min	1000 r/min	500-750 r/min
Ball bearings: lubrication intervals in duty hours							
280	35	2000	3500	-	-	-	-
280	70	-	-	8000	10500	14000	17000
315	35	2000	3500	-	-	-	-
315	90	-	-	6500	8500	12500	16000
355	120	-	-	4200	6000	10000	13000
400	130	-	-	2800	4600	8400	12000
450	140	-	-	2400	4000	8000	8800

Grease outlet opening has closing valves at both ends. This should be opened before greasing and closed 1-2 hours after regreasing. After lubrication close the valves. This ensures that the construction is tight and dust or dirt cannot get inside the bearing.

As an option, a grease collection method can be used.

The table below gives lubrication intervals according to the L1-principle for different speeds. The values are valid for horizontal mounted motors (B3), with about 80°C bearing temperature and using high quality grease with lithium complex soap and mineral or PAO-oil. For more information, see ABB's Low voltage motors manual and the additional manual for Low voltage water cooled motors.

Frame size	Amount of grease g	3600 r/min	3000 r/min	1800 r/min	1500 r/min	1000 r/min	500-750 r/min

450	140	-	-	1200	2000	4000	4400

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated using F_R , as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

where:

- D = diameter of pulley, mm
- P = power requirement, kW
- n = motor speed, r/min
- K = belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5.
- F_R = permissible radial force

Permissible loadings on shaft

The tables give the permissible radial force in Newtons, assuming zero axial force. The values are based on normal conditions at 50 Hz and calculated bearing lives of 20,000 and 40,000 hours.

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

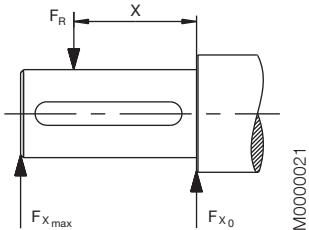

At 60 Hz the values must be reduced by 10%.

Permissible loads of simultaneous radial and axial forces will be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force FR can be calculated from the following formula:

$$F_R = F_{x_0} - \frac{X}{E} (F_{x_0} - F_{x_{max}})$$

E = length of shaft extension in basic version

M0000021

Permissible radial forces

Permissible axial forces

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing lives of 20,000 and 40,000 hours.

At 60 Hz the values are to be reduced by 10%.

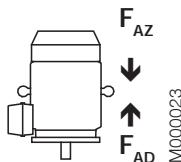

The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces FAD, assumes D-bearing locked by means of locking ring.

Ordering information

When placing an order, please state the following minimum data in the order, as in example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3LP 450L
Pole number	6
Mounting arrangement (IM code)	IM B3 (IM 1001)
Rated output	1050 kW
Product code	3GLP 453 530-RDG
Variant codes if needed	

Explanation of the product code

A	B	C	D	E	F	G	
M3	LP	450	L	3	GLP	45	3
1	2	3	4	5	6	7	8 9 10 11 12 13 14

A = Motor type
B = Motor size
C = Product code
D = Mounting arrangement code
E = Voltage and frequency code
F = Generation code
G = Variant codes

The product code must be, if needed, followed by variant codes.

1) Temperature rise class F

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

Efficiency classes are valid for 2 to 6 pole motors, up to 375 kW. Efficiency values are given according to IEC 60034-2-1; 2007.

Please note that the values are not comparable without knowing the testing method.

ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

1) Temperature rise class F

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

Efficiency values are given according to IEC 60034-2-1; 2007.

Please note that the values are not comparable without knowing the testing method.

ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

1) Temperature rise class F

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

Efficiency classes are valid for 2 to 6 pole motors, up to 375 kW. Efficiency values are given according to IEC 60034-2-1; 2007.

Please note that the values are not comparable without knowing the testing method.

ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

1) Temperature rise class F

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

Efficiency values are given according to IEC 60034-2-1; 2007.

Please note that the values are not comparable without knowing the testing method.

ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

Variant codes

Code	Variant	Frame Size				
		280	315	355	400	450
Administration						
530	2-year extension on standard warranty.	P	P	P	P	P
531	Sea freight packing.	P	P	P	P	P
Balancing						
052	Vibration acc. to Grade A (IEC 60034-14).	S	S	S	S	S
417	Vibration acc. to Grade B (IEC 60034-14).	NA	NA	P	P	NA
423	Balanced without key.	P	P	P	P	P
424	Full key balancing.	P	P	P	P	P
Bearings and lubrication						
036	Transport lock for bearings.	P	P	P	P	P
037	Roller bearing at D-end.	P	P	P	P	P
040	Heat resistant grease.	P	P	P	P	P
041	Bearings regreasable via grease nipples.	S	S	S	S	S
042	Locked drive-end.	S	S	S	S	S
043	SPM compatible nipples for vibration measurement.	S	S	S	S	S
058	Angular contact bearing at D-end, shaft force away from bearing.	P	P	P	P	P
059	Angular contact bearing at N-end, shaft force towards bearing.	P	P	P	P	P
060	Angular contact bearing at D-end, shaft force towards bearing.	P	P	P	P	P
061	Angular contact bearing at N-end, shaft force away from bearing.	P	P	P	P	P
107	Pt100 2-wire in bearings.	P	P	P	P	P
130	Pt100 3-wire in bearings.	P	P	P	P	P
420	Bearing mounted PTC thermistors.	P	P	P	P	P
433	Outlet grease collector.	P	P	P	P	P
796	Grease nipples JIS B 1575 PT 1/8 Type A.	P	P	P	P	P
797	Stainless steel SPM nipples.	P	P	P	P	P
798	Stainless steel grease nipples.	P	P	P	P	P
799	Grease nipples flat type DIN 3404, thread M10x1.	P	P	P	P	P
800	Grease nipples JIS B 1575 PT 1/8" pin type.	P	P	P	P	P
Branch standard designs						
056	Float type leakage detector.	R	R	P	P	P
178	Stainless steel / acid proof bolts.	P	P	P	P	P
204	Jacking bolts for foot mounted motors.	P	P	S	S	S
209	Non-standard voltage or frequency, (special winding).	P	P	P	P	P
396	Motor designed for ambient temperature -20°C to -40°C, with space heaters (code 450/451 must be added).	NA	NA	R	R	R
397	Motor designed for ambient temperature -40°C to -55°C, with space heaters (code 450/451 must be added).	NA	NA	R	R	R
398	Motor designed for ambient temperature -20°C to -40°C.	NA	NA	R	R	R
399	Motor designed for ambient temperature -40°C to -55°C.	NA	NA	R	R	R
425	Corrosion protected stator and rotor core.	P	P	P	P	P
Cooling system						
075	Cooling method IC418 (without fan).	NA	NA	NA	R	R
Coupling						
035	Assembly of customer supplied coupling-half.	P	P	P	P	P
Documentation						
141	Binding dimension drawing.	P	P	P	P	P
Drain holes						
065	Plugged existing drain holes.	P	P	P	P	P
448	Draining holes with metal plugs.	P	P	P	P	P

P = New manufacture only
R = On request

S = Included as standard
NA = Not applicable

Code	Variant	Frame Size				
		280	315	355	400	450
Earthing bolt						
067	External earthing bolt.	S	S	S	S	S
Heating elements						
450	Heating element, 100-120V.	P	P	P	P	P
451	Heating element, 200-240V.	P	P	P	P	P
Insulation system						
014	Winding insulation class H.	P	P	P	P	P
405	Special winding insulation for frequency converter supply.	P	P	P	P	P
406	Winding for supply >690<=1000 Volts.	P	P	P	P	P
Mounting arrangements						
009	IM 2001 foot/flange mounted, IEC flange, from IM 1001 (B35 from B3).	P	P	P	P	P
066	Modified for specified mounting position differing from IM B3 (1001), IM B5 (3001), B14 (3601), IM B35 (2001) & IM B34 (2101).	S	S	P	P	P
305	Additional lifting lugs.	P	P	S	R	R
Painting						
111	Painting system C3M acc. to ISO 12944-5:2007	S	S	NA	NA	NA
114	Special paint colour, standard grade.	P	P	P	P	P
115	Painting system C4M acc. To ISO 12944-5: 2007	P	P	P	P	P
754	Painting system C5M acc. to ISO 12944-5:2007	NA	NA	P	P	P
Protection						
005	Metal protective roof, vertical motor, shaft down.	NA	NA	R	R	R
076	Draining holes with plugs in open position.	S	S	NA	NA	NA
158	Degree of protection IP65.	P	P	P	R	NA
403	Degree of protection IP56.	P	P	P	P	P
434	Degree of protection IP56, open deck.	P	P	P	P	NA
783	Labyrinth sealing at D-end.	P	P	S	S	S
Rating & instruction plates						
002	Restamping voltage, frequency and output, continuous duty.	P	P	P	P	P
003	Individual serial number.	S	S	S	S	S
004	Additional text on std rating plate (max 12 digits on free text line).	P	P	P	P	P
095	Restamping output (maintained voltage, frequency), intermittent duty.	P	P	P	P	P
126	Tag plate.	P	P	P	P	P
135	Mounting of additional identification plate, stainless.	P	P	P	P	P
139	Additional identification plate delivered loose.	P	P	P	P	P
159	Additional plate with text "Made in"	P	P	P	P	P
160	Additional rating plate affixed.	P	P	P	P	P
161	Additional rating plate delivered loose.	P	P	P	P	P
163	Frequency converter rating plate. Rating data according to quotation.	P	P	P	P	P
Shaft & rotor						
069	Two shaft extensions as per basic catalogue.	P	P	P	P	P
070	One or two special shaft extensions, standard shaft material.	P	P	P	P	P
156	Cylindrical shaft extension, N-end, without key-way.	NA	NA	R	R	R
164	Shaft extension with closed key-way.	NA	NA	R	R	R
165	Shaft extension with open key-way.	S	S	S	S	S
410	Stainless steel shaft (standard or non-standard design).	P	P	P	P	P
Standards and regulations						
421	VIK design (Verband der Industriellen Energie- und Kraftwirtschaft e.V.).	NA	NA	R	R	R
775	Design according to SHELL DEP 33.66.05.31-Gen. January 1999 design.	NA	NA	NA	NA	R
778	GOST Export/Import Certificate (Russia).	NA	NA	R	R	R
779	SASO Export/Import Certificate (Saudi Arabia)	NA	NA	R	R	R

Water cooled motors in brief

Basic design

Motor size		280	315	355	400	450				
Stator	Material	Cast aluminum		Steel plate						
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G / RAL 5014								
	Paint thickness	C3 medium								
Bearing end shields	Material	Cast iron EN-GJL200/GG20/GRS 200, EN-GLJ-250/GG25/GRS 250, EN-GJS-400/GG40/GRP 400								
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G / RAL 5014								
	Paint thickness	C3 medium								
Bearings	D-end 2-pole	6316/C3	6316/C3	NA						
	D-end 4-8 pole		6319/C3	6322/C3	6324/C3	6326M/C3				
	N-end 2-pole	6316/C3	6316/C3	N/A						
	N-end 4-8 pole			6316/C3	6319/C3	6322/C3				
Axially-locked bearings	Inner bearing cover	As standard, locked at D-end								
Bearing seals		V-ring or labyrinth seal as standard see chapter on Bearing seal								
Lubrication		Regreasable bearings, regreasing nipples, M10x1								
Measuring nipples		As standard								
Rating plate	Material	Stainless steel, EN 10088, thickness 0.5 mm								
Terminal box	Frame material	Cast iron EN-GJL-250/GG 25/GRS 250								
	Cover material	Cast iron EN-GJL-250/GG 25/GRS 250				Steel				
	Cover screws material	Steel 8.8, zinc electroplated								
Connections	Cable entries	Aluminum non-drilled flange	Painted non-drilled steel flange							
	Terminals	6 terminals for connection with cable lugs (not included)								
	Cable glands	Cable glands as option								
Stator winding	Material	Copper								
	Insulation	Insulation class F								
	Winding protection	3 PTC thermistors as standard, 155°C								
Rotor winding	Material	Pressure die-cast aluminum								
Balancing method		Half key balancing as standard								
Key way		Open key way								
Heating elements	On request	65 W	2x65 W	2x65 W	2x65 W	2x100 W				
Drain holes		Standard, open on delivery								
Enclosure		IP 55, higher protection on request								
Cooling method		IC71W								

ABB Motors' and Generators' total product offer

ABB offers several comprehensive ranges of AC motors and generators. We manufacture synchronous motors for even the most demanding applications, and a full range of low and high voltage induction motors. Our in-depth knowledge of virtually every type of industrial processing ensures we always specify the best solution for your needs.

Low voltage motors

- Process performance motors
- Industrial performance motors
- General performance motors

High voltage induction motors

- High voltage cast iron motors
- Induction modular motors
- Slip-ring modular motors

Motors and generators for explosive atmospheres

- Flameproof
- Increased safety
- Non-sparking
- Pressurized
- Dust ignition proof

Marine motors and generators

Synchronous motors

Generators

- Synchronous generators for diesel and gas engines
- Synchronous generators for steam and gas turbines
- Wind turbine generators

DC motors

Traction motors and generators

- Frameless traction motors
- Modular traction motors
- Synchronous traction generators

Motors for other applications

- Low voltage open drip proof motors
- Low voltage brake motors
- Low voltage single phase motors
- Low voltage high ambient motors
- Permanent magnet motors and generators
- High speed motors
- Low voltage smoke venting motors
- Low voltage water cooled motors
- Motors for roller table drives
- Servo motors

Motors and Generators

ABB offers comprehensive range of electric and high efficiency motors and generators for all applications.

ABB have what it takes to help every industry and application reach new levels of efficiency and reliability. By combining the latest in technology with the best available materials with superior craftsmanship, the motors are designed to operate reliable for whatever how challenging the process or application, and to have a low lifecycle cost.

ABB launches high speed permanent magnet generator series for 1.0 - 2.0 MW full converter concepts.

ABB launches next generation high wind power generator series for the double-Har 1.5 - 2 MW turbines.

Our offering

Low Voltage Motors High Voltage Induction Motors

Motors and Generators for Aerospace Applications DC Motors

Synchronous Generator Wind Turbine Generators

Synchronous Motors Traction Motors

Generators Buses

Low voltage motors

ABB offers a wide range of low voltage AC motors with improved energy efficiency and lifetime value.

ABB has long advanced the need for efficiency in motors, and high-efficiency products have become the core of its portfolio for many years.

Our offering

Product Performance Motors
IEC frame sizes 71 to 400
0.25 to 1000 kW

Second Performance Motors
IEC frame sizes 71 to 400
0.25 to 200 kW

Drives Motors
