040/080

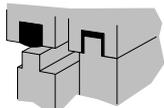

Termoplastico / Thermoplastic

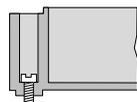

Principi costruttivi applicati / Construction principles applied

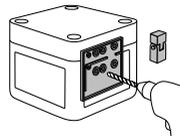

Le manopoline, fornite per l'avvitamento manuale, si incastrano sulla testa delle viti e sono la soluzione ideale per contenitori che devono essere aperti facilmente e comodamente.  
*The knobs provided for manual tightening fit into the head of the screw and are the ideal solution in the case of containers for which easy, trouble-free opening must be assured*

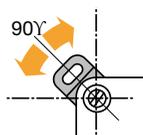

La guarnizione stampata in un unico pezzo adotta il sistema "linguetta-scandalatura" che evita la fuoriuscita o tagli di giunzione, e conferisce al contenitore un grado di protezione IP 66.  
*The seal, moulded in a single piece, uses the "groove and tongue system" which prevents protrusions or splicing cuts and endows the container with an IP 66-protection rating.*

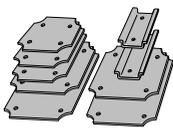

I fori di fissaggio sono situati in cave in asse con le viti del coperchio e quindi esterne alla zona protetta dalla guarnizione; non possono essere manomessi dopo la chiusura del contenitore. Sulla base inferiore della cassetta sono stampate chiaramente le dime di fissaggio per una corretta installazione. Sul fondo della scatola sono predisposti dei fori per fissaggio alternativi agli altri sistemi; una volta serrate le viti gli alloggiamenti delle stesse possono essere coperti con appositi tappi forniti insieme alla scatola.  
*The fastening holes are located in hollows in line with the screws of the cover, therefore outside the area protected by the seal. They cannot be tampered with once the container has been closed. The fastening template for correct insulation is clearly stamped on the lower base of the box. Alternate fastening holes to other systems are provided on the bottom of the box. Once the screws have been drawn up, their housings can be covered with specific plugs provided together with the box.*

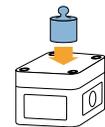

Sono disponibili due versioni di cerniere, in funzione delle dimensioni del contenitore. La foratura per il montaggio è facilitata grazie ad una mascherina che si incastra fermamente nel lato da forare. La piastra è fornita in dotazione alla confezione della cerniera.  
*Two versions of hinges are available according to the dimensions of the container. Drilling for assembly is facilitated by a plate, which firmly fits into the side to be drilled. The plate is furnished with the hinge kit.*

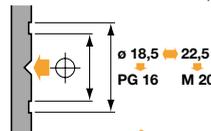

Il fissaggio a muro è possibile grazie all'adozione di apposite staffe in termoplastico di facile montaggio, fornite nella confezione o con staffe in metallo con uso di viti. Le zanche possono ruotare di 90° in modo da facilitare l'installazione.  
*The boxes can be wall mounted using purpose-designed thermoplastic brackets provided in the kit. Installation is simple and does not require use of screws. The brackets can rotate by 90° to facilitate installation. Fastening is afforded by brass inserts.*

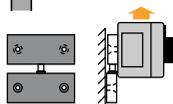

Il fondo della cassetta è predisposto per l'inserimento di piastre o guide din per l'installazione di morsettiere ed altri componenti, e in alcuni modelli è possibile l'installazione di una piastra superiore per montaggio di apparecchi. Il fissaggio è realizzato con inserti in ottone.  
*The bottom of the box is pre-engineered for insertion of plates or DIN guides for installation of terminal boards and other components, and, in some models, an upper plate can be installed for equipment assembly. Fastening is afforded by brass inserts.*

Le caratteristiche del materiale termoplastico, senza alogeni e quindi nessuna emissione di gas pericolosi, e l'elevato spessore delle pareti garantiscono l'utilizzo anche in casi dove il contenitore è sottoposto a situazioni esterne gravose. Classe di isolamento  $\square$   
*The characteristics of the thermoplastic material, without halogens, and therefore without any emissions of hazardous gases and the high gauge walls guarantee use also in cases in which the container is installed in particularly harsh environments. Insulation class  $\square$*

Su di un lato della base della cassetta, è stampata la dima per una possibile foratura di ingresso cavo, con centrino per il posizionamento dell'utensile. Sono indicate le diverse dimensioni per sistema PG o Metrico.  
*The template for drilling any cable feed hole is impressed on one side of the base of the box with a centre mark for tool positioning. The various dimensions for the PG or Metric system are indicated.*

E' disponibile un dispositivo per fissare a parete le Contenitori removibili in modo semplice efficiente e sicuro. Sono applicabili maniglie per una presa sicura evitando azionamenti accidentali dei pulsanti.  
*A device is also available for wall-mounting of the boxes that permits trouble-free, safe and efficient removal. Handles can be applied for safe gripping to avoid accidental activation of the buttons.*

040/080

## PERCHE' I CONTENITORI ELFIN

Il primo criterio di valutazione, quando si opera una scelta sui contenitori da utilizzare, è sicuramente la dimensione; ma successivamente è opportuno analizzare i comportamenti delle Contenitori alle condizioni ambientali in cui devono operare, in sostanza i gradi di protezione e le caratteristiche del materiale.

In questo capitolo sono descritte le caratteristiche dei materiali utilizzati nella produzione delle Contenitori serie 080 in modo da ricercare la qualità del prodotto e facilitare la scelta finale dell'utente.

<b>MATERIALE CASSETTA</b>	Polycarbonato con fibre di vetro	Grigio RAL 7035
<b>MATERIALE COPERCHIO GIALLO</b>	Polycarbonato	Giallo RAL 1004
<b>MATERIALE COPERCHIO TRASPARENTE</b>	Polycarbonato	Fumé

<b>OMOLOGAZIONI</b>	Bureau Veritas	

## TERMOPLASTICO POLICARBONATO

Il polycarbonato, per le sue qualità fisico meccaniche, è il materiale ideale per la costruzione di contenitori e Contenitori in termoplastico. Le caratteristiche fondamentali sono:

- Alta resistenza alle temperature
- Eccellenti proprietà isolanti anche in presenza di umidità
- Autoestinguento
- Alta resistenza agli shock grazie anche all'uso di fibre di vetro
- Forte resistenza agli agenti chimici
- Possibilità di realizzare prodotti con ottime finiture
- Esecuzione dei coperchi in versione trasparente
- Stabilità ai raggi ultravioletti<sup>(1)</sup>
- Facilità di lavorazioni meccaniche (tranciature, forature, ecc.)
- Possibilità di verniciature, incollatura o saldatura

## IL POLIURETANO

Fattore determinante per garantire la qualità di un contenitore è la scelta della guarnizione. Il tipo di materiale e la sua collocazione determinano l'ermeticità e la durata nel tempo del prodotto.

Le Contenitori serie 080 utilizzano una guarnizione in poliuretano che, per sua natura, è il materiale ideale per la protezione di un contenitore.

Le caratteristiche fondamentali sono:

- Residuo di compressione quasi nullo
- Il materiale si stampa direttamente nella scanalatura dei coperchi garantendo così immobilità e continuità
- Alta resistenza alle temperature (da -50° a + 130°C)
- Alta resistenza agli agenti atmosferici

## REASONS FOR CHOOSING ELFIN CONTAINERS

When choosing the container to be used, the first aspect to be considered is undeniably size. However, subsequently it is advisable to analyse how the boxes behave in the environmental conditions in which they are required to operate, that is to say protection ratings and characteristics of the material.

This chapter describes the characteristics of the materials used to produce the 080 Series boxes in order to achieve product quality and to facilitate final selection by the user.

<b>BOX MATERIAL</b>	Polycarbonate with glassfiber	RAL 7035 Grey

<b>APPROVALS</b>	Bureau Veritas	

## POLYCARBONATE THERMOPLASTIC

Its physical-mechanical properties make polycarbonate the ideal material for the construction of thermoplastic containers and boxes. Its main characteristics are as follows:

- High resistance to temperatures
- Excellent insulating properties also in the presence of damp
- Self-extinguishing
- High resistance to shock also assured by use of glassfiber
- Strong resistance to chemical agents
- Possibility of constructing products with excellent finish
- Possibility of making transparent covers
- Stability to ultraviolet rays (1)
- Ease of machining (shearing, drilling, etc.)
- Possibility of painting, gluing or soldering

## POLYURETHANE

The type of seal used is one of the major factors in guaranteeing the quality of the container. Product seal and duration are closely tied to the type of material used and its position.

The 080 Series boxes are equipped with a polyurethane seal whose properties make it the ideal material to protect a container.

Its main characteristics are as follows

- Almost null residual compression
- The material is moulded directly in the groove of the covers, thus guaranteeing immobility and continuity
- High resistance to temperatures (from -50° to +130°C)
- High resistance to atmospheric agents

**CARATTERISTICHE DEI MATERIALI IMPIEGATI NELLA COSTRUZIONE DEI CONTENITORI SERIE 080**

Nelle tabelle seguenti sono indicate le caratteristiche di resistenza dei materiali impiegati nella produzione della serie 080. Nella valutazione di questi dati è opportuno tenere conto della concentrazione degli agenti chimici e della temperatura. In caso di miscele di prodotti chimici agenti sull'involucro è consigliabile effettuare un esame attento per valutare la resistenza effettiva.

**RESISTENZA CHIMICA DEI TERMOPLASTICI**

### CHARACTERISTICS OF THE MATERIAL USED TO CONSTRUCT THE 080 SERIES CONTAINERS

The resistance characteristics of the materials used to produce the 080 Series are given in the tables below. When assessing these data, it is advisable to take into account the concentration of chemical agents and temperatures. If the casing is liable to be affect of mixes of chemical products it is advisable to make a careful examination to assess effective resistance.

CHEMICAL RESISTANCE OF THERMOPLASTIC MATERIALS	Chemical Agents

## Quadri in poliestere *Polyester boxes*

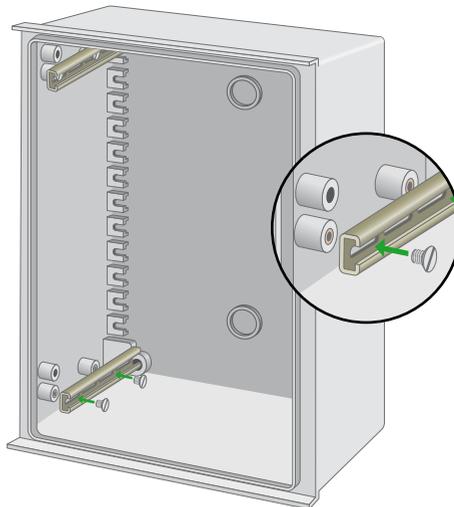

080

## Istruzioni montaggio piastre scorrevoli - *Moveable base-plate mounting instruction*

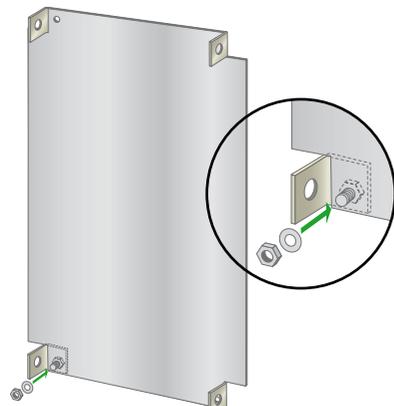

Componenti, tipo e numero presenti nella confezione - *Components (type and number) present in the package*

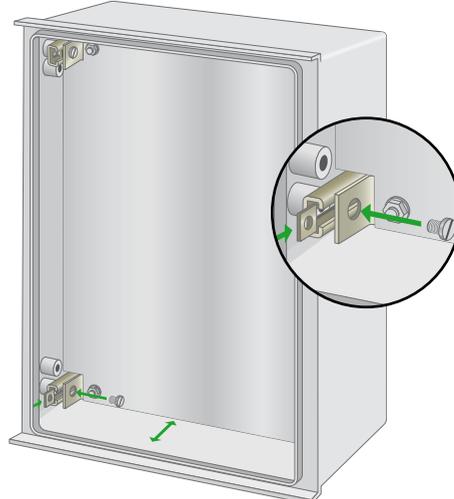

Inserire gli inserti metallici (A) nelle apposite sedi laterali  
*Put in the metal insert (A) in the proper side seat*

Applicare le guide (B) con le viti (C) negli inserti metallici  
*Put on guides (B) with screws (C) in the metal insert*

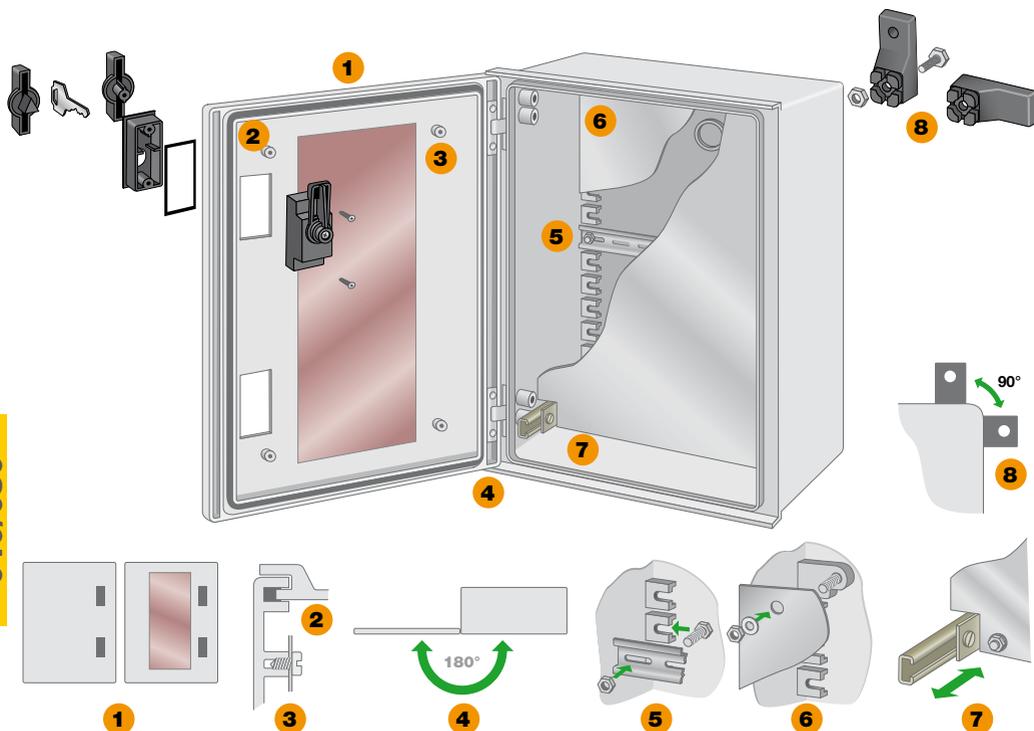

Applicare le staffe (D) alla piastra di fondo (E) utilizzando i bulloni (F), le rondelle (G) e i dadi (H)  
*Put on bracket (D) on base plate (E) using bolts (F) rings (G) and nuts (H)*

Inserire la piastra con le staffe montate e regolarle sulle guide con le viti (I) e i dadi quadrati (L)  
*put in the plate with mounted brackets and adjust it on the guides with the screws (I) and the square nuts (L)*

## Valvola di ventilazione anticondensa Anti-condensate ventilation valve

La valvola anticondensa è la soluzione ideale per risolvere i problemi di compensazione di pressione e protezione dall'umidità che si possono creare nelle cassette pulsantiere poste in condizioni ambientali critiche. La particolare struttura a membrana permette la circolazione dell'aria ed impedisce l'entrata di liquidi all'interno della cassetta grazie anche alla guarnizione O-ring.

La valvola trova applicazioni ottimali in pannelli di controllo, telai di motori, cassette, pompe, luci sotterranee, luci spot, ecc.

*The anti-condensate valve is the ideal solution to solve pressure compensation and humidity problems that could arise with push-button panels, enclosed in boxes and exposed to critical environmental conditions. Its special membrane configuration, along with the O-ring with which it is equipped, facilitate the circulation of air and prevent the entrance of liquids inside the box. This valve can be ideally used for control panels, motor frames, boxes, pumps, underground lighting systems, spot lights, etc.*

### Caratteristiche - Characteristics

Permeabile all'aria e resistente all'acqua in entrambe le direzioni.  
Permeable to air and resistant on both sides.

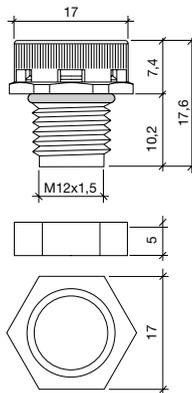

Repellente all'olio: 010VV - 010VV400  
Oleophobic: 010VV - 010VV400

Superficie attiva delle membrane nel tappo di aerazione è di 0,5 cm<sup>2</sup>  
Activated area of the membrane in the aeration cup is 0,5 cm<sup>2</sup>

Grado di protezione: IP67  
Protection degree: IP67

Temperatura di lavoro: -40°C / + 105°C  
Operating temperature: -40°C / +105°C

L'applicazione orizzontale non è consigliata  
Horizontal application is not recommended

permeabilità all'aria  
permeability to air
